## **FETC Conference Services**

**M**any conferences covering various advanced energy technologies are sponsored by the Federal Energy Technology Center (FETC). The Center also cosponsors many other conferences, providing support service for some, and bring their expertise in varied energy-related disciplines to others.

FETC works in close cooperation with private industry to develop new technologies for the domestic power generation industry and enhance environmental control options. Through Cooperative Research and Development Agreements (CRADAs), private/government partnering on joint research efforts, timely advances are being made in all fields of energy research. Other agreements with colleges and universities and the other National Laboratories maintain and strengthen our nation's leadership role in the energy and environmental fields.

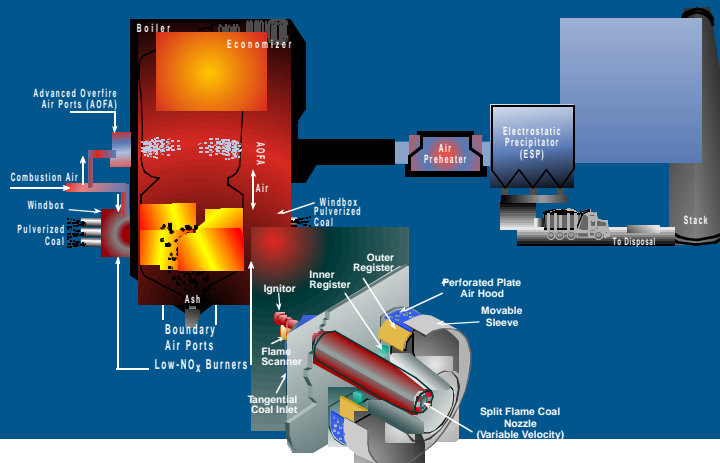

International activities are a significant strength in the Center's strategy. Worldwide interest in pollution control, and a burgeoning global need for electric power in developing countries, continue to demand that competitive, cost effective methods be developed to meet the increasing need for energy in the 21st century.

Conferences, workshops, and other technology transfer vehicles will help to assure that this cooperation, sharing and dissemination of knowledge among the private sector, domestic and international governments, and academia will be carried forth into the future.
